

## Chsh

### **Change a Users Login Shell for Abuse/Unpaid Fees etc.**

This will prevent a User from logging into the system via ssh/samba etc.

The Message etc. must be in /etc/shells. The -s option makes it NOT interactive for the user to select shell.

```
chsh -s /etc/messages/message user
```

Default shell = /bin/bash

---

Info. got from skynet. - Cheers lads.
