

Openvpn

I haven't had a chance to test this out fully. Here are some links and info which I have come across on this topic.

Contents

- [1 Install](#)
- [2 Config](#)
- [3 Errors on Starting
openvpn](#)
- [4 Simple Static
Config](#)
- [5 Misc Links](#)

Install

```
apt-get install openvpn
```

Config

Configs are kept in /etc/openvpn/

Errors on Starting openvpn

Error message is: "Cannot open TUN/TAP dev /dev/tap0: No such file or directory (errno=2)". Even if you enabled the TUN/TAP module in the kernel you have to: (

<http://openvpn.net/archive/openvpn-users/2004-04/msg00136.html>)

```
mkdir /dev/net  
mknod /dev/net/tun c 10 200 (Linux kernel 2.4.x)
```

Simple Static Config

<http://openvpn.net/static.html>

Misc Links

Good Notes on Configing and generating client and server certs : <http://deb.riseup.net/networking/openvpn/>
Look in /usr/share/doc/openvpn/examples/easy-rsa for making certs.

Good Debugging and solutions to errors: <http://forums.gentoo.org/viewtopic.php?t=233080>
