

## Search\_for\_all\_Processes\_and\_kill\_them\_all

So I had a lot of apache processes running and I wanted to kill them all.

```
pkill -9 www-data  
#didn't work
```

```
kill -9 id  
#did work
```

### Script:

```
for process in `ps -eaf | grep www-data | awk '{print $2}'`; do kill -9 $process; done  
#worked a charm
```
