

Squirrelmail

Installing SquirrelMail

```
apt-get install squirrelmail
```

```
/usr/sbin/squirrelmail-configure  
symlink squirrelmail to mail in /var/www
```

```
ln -s /usr/share/squirrelmail webmail
```

Open up port 143 for IMAP on localhost - no need for TLS or SSL - because on same server
Check Iptables file to make sure of this:

```
iptables -A INPUT -s 127.0.0.0 -p tcp --dport 143
```

Setting up Vhost in Apache for mail.kartbuilding.net

```
<VirtualHost mail.kartbuilding.net:80>  
    ServerAdmin webmaster@localhost  
    ServerName mail.kartbuilding.net  
    RedirectMatch ^/$ https://mail.kartbuilding.net  
</VirtualHost>  
  
<VirtualHost mail.kartbuilding.net:443>  
    ServerAdmin webmaster@localhost  
    ServerName mail.kartbuilding.net  
    DocumentRoot /var/www/webmail  
    HostnameLookups Double  
    #CustomLog /var/log/apache2/access_misc.log combined  
    #ErrorLog /var/log/apache2/error_misc.log  
    LogLevel warn  
    <Directory />  
        Options FollowSymLinks Indexes MultiViews  
        AllowOverride None  
    </Directory>  
    SSLEngine On  
    SSLCertificateFile /etc/apache2/ssl/apache.pem  
</VirtualHost>
```
