

## X\_Server\_Upgrading\_Issues

Upgrading from sarge to etch went fine. Vncserver is used for the X display as there is no monitor plugged into the server. X and vncserver remained fine after the install and worked ok.

For some X applications, Firefox, or Iceweasel as it was renamed in Debian, Font errors appeared. They were similar to:

### Error

```
Error: Cairo does not yet support the requested image format:
```

```
Depth: 8
Alpha mask: 0x00000000
Red  mask: 0x00000007
Green mask: 0x00000038
Blue  mask: 0x000000c0
```

Please file an enhancement request (quoting the above) at:

[http://bugs.freedesktop.org/enter\\_bug.cgi?product=cairo](http://bugs.freedesktop.org/enter_bug.cgi?product=cairo)

xfce4-tips: /home/dajobe/dev/debian/cairo/cairo-1.2.4/src/cairo-image-surface.c:155: \_cairo\_format\_f

After some googling I found that it was to do with the Display Depth (8bit) used by vncserver. The latest version of cairo does not support 8bit images. 16bit colour is required.

### Solution

```
vncserver -geometry="1024x768" -depth="16"
```
